

### ***Nuzulia Andria about her experience with GIST***

"The GIST programme has opened my door to international experience, both personally and more over of course, professionally. It gave me a chance to be part of two different education systems: Singaporean and German, integrated in harmony and synergized and becoming one as GIST. It has widened my perspective, broadened my view, and has made me to be able to see, to think and to analyze from many different points of view. In my opinion, continuous learning is the most crucial thing in life, and I have learned this as the time I spent at GIST.

The most substantial strength of GIST programme is its robust cooperation with industrial environment. Its strong connection with huge German chemical companies which fully support GIST and its students to grow. This is what has made me what I am now.

I did my master thesis at Süd Chemie AG, in Heufeld Germany, dealing with research on catalyst division. My good impression of Süd Chemie as a company and theirs too, has lead to a good partnership.

I am now working as permanent employee at Süd Chemie Indonesia, member of Süd Chemie groups. I am responsible for technical support and services. My position now is as Technical Support Manager, covering most of portfolio produced by Süd Chemie Indonesia, mainly bentonite-based products."
